

Vriksham Jobs ATS

Recruiter Operational Training & User Reference Guide

Vriksham Jobs ATS: Enterprise User Training & Operational Guide

Welcome to the **Vriksham Jobs ATS User Guide**. This guide is written for recruiters, account managers, and administrators. It explains every feature in simple language with real-life analogies, prerequisites, step-by-step instructions, and visual UI screenshots.

1. Executive Overview & Regional Standards

Vriksham Jobs ATS is our central recruitment platform. To make sure everyone on the team works smoothly without data errors, every record follows standard Indian recruitment rules.

Plain-English Standards:

- **Currency Standard (Rupees ₹):** All salaries, CTC ranges, and placement rates are strictly in **Indian Rupee (INR ₹)**.
- **Phone Number Standard (+91):** All mobile numbers format automatically to the Indian 10-digit format (**98765 43210**) with a fixed **+91** country code prefix.
- **Smart Copy-Paste:** When you paste any phone number (even messy ones with dashes or extra spaces like **09876543210** or **+91-98765-43210**), the system automatically cleans it and extracts the exact 10-digit mobile number.
- **Division Scoping:** Every record belongs to a team division (for example: *Mangalore Hiring Team*).

2. Order of Operations: What Must Be Created First?

In recruitment, you cannot send a candidate to a client if the client company does not exist in the system yet. Following the correct step-by-step sequence saves time and prevents mistakes.

Simple Creation Sequence:

```
graph TD
  A["1. Division (Team Branch)"] --> B["2. Recruiter Account"]
  B --> C["3. Client (Company)"]
  C --> D["4. Contact (Hiring Manager)"]
  B --> E["5. Candidate (Job Seeker)"]
  D --> F["6. Job Order (Opening)"]
  E --> G["7. Submission (Shortlist)"]
  F --> G
  G --> H["8. Placement (Hired!)"]
```

Prerequisites Cheat-Sheet

STEP	ENTITY	PLAIN-ENGLISH EXPLANATION	WHAT MUST EXIST FIRST?
1	Division	Your team branch or department (for example: <i>Mangalore Hiring Team</i>).	Admin User
2	Recruiter	The login account for each team member using the ATS.	Division
3	Client	The employer/company hiring talent (for example: <i>Acme Technologies</i>).	Division & Recruiter
4	Contact	The specific person or manager working at the Client company.	Client Company
5	Job Order	The specific job opening given to us by a Client (for example: <i>React Developer</i>).	Client AND Contact
6	Candidate	A job seeker or applicant stored in our talent database.	Division & Recruiter
7	Submission	Nominating a Candidate's resume for a specific Job Order.	Candidate & Job Order
8	Placement	The final record created when a candidate is successfully hired!	Candidate, Job Order, Client

3. Step-by-Step Module Guide

Module 1: Divisions & Recruiter Setup

What is a Division in simple terms?

Think of a **Division** as your team's digital branch office (for example: *Mangalore Hiring Team*). It groups team members, candidates, and client accounts into a shared container.

Data Access Modes:

- **Collaborative:** Everyone in the team can see and share records.
- **Owner Only:** Recruiters only see records they explicitly own.

What is a Recruiter / User Profile in simple terms?

This is the personal login account for each recruiter or manager on your team. Every recruiter is linked to a Division and assigned a role (*Administrator, Director, or Recruiter*).

Module 2: Clients (Employer Companies)

What is a Client in simple terms?

A **Client** is the company or business that hires our recruitment agency to find talent for them (for example: *Wipro*, *Infosys*, or *Acme Tech Pvt Ltd*).

Why do we need it first?

You cannot create a contact person or a job opening without first creating the Client company profile.

- **Prerequisites:** Division and Assigned Recruiter (Owner).
- **Required Fields** (*): Company Name, Status, Division, Assigned Recruiter.

DESCRIPTION

Company description

Save Client

Client Setup

Use this record for the account itself. Hiring managers and portal reviewers should be created as contacts after the client exists.

BEFORE YOU SAVE

- Set the assigned recruiter and division correctly before adding contacts or job orders.
- Use the real ZIP code and website so location and account context stay clean.
- Add a short description when the client needs quick internal context.

WHAT HAPPENS NEXT

- The saved client record becomes the parent for contacts, job orders, and downstream reporting.
- New contacts and job orders can inherit context from this account immediately.

GOOD PRACTICE

- If the assigned recruiter is likely to change, fix it now instead of after contacts and jobs are attached.
- Keep the client name canonical to reduce duplicate account creation.

How to create a Client step-by-step:

1. Click **Clients** → **New Client** from the left navigation menu.
2. Type the **Company Name** (for example: *Acme Technologies*).
3. Select **Status** (*Active* or *Prospect*).
4. Select your **Division** (for example: *Mangalore Hiring Team*) and **Assigned Recruiter**.
5. Click **Save Client**.

Module 3: Contacts (Client Representatives / Hiring Managers)

What is a Contact in simple terms?

A **Contact** is an actual person who works at the Client company: specifically the HR Manager, Talent Manager, or Engineering Lead who gives us job requirements and interviews our candidates.

💡 **Real-Life Analogy:** If *Acme Technologies* is the **Client Company**, then *Mr. Rajesh Sharma (HR Head at Acme)* is the **Contact Person**.

Why do we need it?

When we submit candidates or send job updates, we send them directly to the Contact person.

- **Prerequisites:** **Client (Company)** must be created first!
- **Required Fields** (*): First Name, Last Name, Email, Mobile (+91 format), Source, Division, Recruiter, **Client Company**.

Save Contact

Contact Setup

Use contacts for hiring managers, approvers, and anyone who should receive client portal links or recruiting communication.

BEFORE YOU SAVE

- Email, phone, source, assigned recruiter, and client are required because the contact needs to be actionable immediately.
- Attach the contact to the correct client so job-order lookups and portal workflows stay scoped properly.
- Use a real title or department when it helps recruiters understand the person's role.

WHAT HAPPENS NEXT

- The contact can be selected as a hiring manager on job orders right after save.
- Client portal links and future communication workflows rely on the contact email being accurate.

GOOD PRACTICE

- If this person should review candidates externally later, verify the email now.
- Use one clean contact record per real person to avoid portal and notification confusion.

How to create a Contact step-by-step:

1. Click **Contacts** → **New Contact** or click **Add Contact** directly from a Client's detail page.
2. Select the parent **Client Company** (for example: *Acme Technologies*).
3. Enter the person's **First Name** and **Last Name** (for example: *Rajesh Sharma*).
4. Enter their **Email** and **Mobile Number** (Auto-formats with **+91**).
5. Select **Division** and **Assigned Recruiter**.
6. Click **Save Contact**.

Module 4: Job Orders (Job Openings / Requisitions)

What is a Job Order in simple terms?

A **Job Order** is an active job opening or mandate given to us by a Client company (for example: *2 Openings for Senior React Developer at Acme Tech*).

Why do we need it?

It defines what kind of candidate the client is looking for, how many people to hire, the salary range in Rupees (₹), and who the hiring contact is.

- **Prerequisites:** Both the **Client Company** AND the **Contact Person** must exist first!
- **Required Fields** (*): Job Title, Status, Openings, Division, Recruiter, **Client**, **Contact**.

☐ Publish to Career Site

Add a public description before enabling career-site publishing.

Job Order Setup

This record drives matching, submissions, interviews, the client portal, and public job publishing when enabled.

BEFORE YOU SAVE

- Set the correct assigned recruiter, client, hiring manager, status, and employment type before saving.
- Use a real ZIP code and location so search and matching stay credible.
- If you plan to publish publicly, finish the public description before turning that on.

WHAT HAPPENS NEXT

- The job opens directly into matching, submissions, and client portal workflows.
- Open job orders can be matched against candidates immediately after save.
- The assigned contact can later receive a persistent client review portal link for this job.

GOOD PRACTICE

- Keep internal description for recruiter context and public description for candidate-facing copy.
- Pick the right hiring manager now because the portal and downstream client workflow hang off that relationship.

How to create a Job Order step-by-step:

1. Click **Job Orders** → **New Job Order**.
2. Type the **Job Title** (for example: *Senior React Developer*).
3. Select the employer **Client Company** and the hiring **Contact** person.
4. Set **Openings** (for example: **2**).
5. Enter Salary range in **INR (₹)**.
6. Select **Division** and **Assigned Recruiter**.
7. Click **Save Job Order**.

Module 5: Candidates (Job Seekers / Talent Database)

What is a Candidate in simple terms?

A **Candidate** is a job seeker or professional whose resume and profile are stored in our talent database.

Why do we need it?

This is our talent pool. Every candidate profile holds their resume, skills, contact details, work history, and interview feedback.

- **Prerequisites:** Division and Assigned Recruiter.
- **Required Fields** (*): First Name, Last Name, Email, Mobile (+91 format), Status, Source, Division, Recruiter.

SKILLS

No skills selected.

Candidate Setup

Use manual entry for direct sourcing and resume parse when you want a faster first draft.

BEFORE YOU SAVE

- Make sure email, mobile, source, assigned recruiter, and current role details are real before saving.
- Pick the correct stage up front so matching, submissions, and interviews behave correctly.
- Review parsed resume data before saving if you used the resume workflow.

WHAT HAPPENS NEXT

- The candidate record opens immediately after save for notes, files, AI summary, and matching.
- Qualified candidates can be submitted and scheduled for interviews right away.
- Primary resume labeling controls what can be exposed later in the client portal.

GOOD PRACTICE

- Use Resume Parse when you want structure quickly, then tighten the record before saving.
- Keep the assigned recruiter accurate because reporting, notifications, and downstream workflows depend on it.

How to add a Candidate step-by-step:

1. Click **Candidates** → **New Candidate**.
2. Upload a **Resume PDF/Word document** (AI will parse skills and work history automatically!) OR enter details manually.
3. Verify Name, Email, and **Mobile Number** (Indian

+91

 format enforced).
4. Select **Division** (for example: *Mangalore Hiring Team*) and **Assigned Recruiter**.
5. Click **Save Candidate**.

Module 6: Submissions (Shortlisting Candidates for Jobs)

What is a Submission in simple terms?

A **Submission** means shortlisting a Candidate from our database and presenting their profile/resume for a specific open Job Order.

- **Prerequisites:** Candidate AND Job Order must both exist!

Module 7: Interviews (Scheduling Meetings)

What is an Interview in simple terms?

An **Interview** is a scheduled meeting (phone screening, video call, or client interview) between a Candidate and the interviewer.

Module 8: Placements (Successful Hires!)

What is a Placement in simple terms?

A **Placement** is the final record created when a candidate is officially selected, accepts the offer, and gets hired by the client company! It records the join date, offered salary (₹), and agency billing terms.

4. Quick Summary Checklist for Recruiters

Before creating any record, quickly check this list:

- ☐ **Adding a Client?** → Make sure you know which Division and Recruiter will own it.
- ☐ **Adding a Contact?** → Create the **Client Company** first!
- ☐ **Creating a Job Order?** → Make sure both **Client Company** and **Contact Person** are selected.
- ☐ **Adding a Candidate?** → Enter mobile number using the 10-digit Indian format (**+91** is automatic).
- ☐ **Entering Salary / CTC?** → Enter all figures in **INR (₹)**.
